

Kreaxions 4 in 1 punches

All punches come with 3 inserts (except for punch 907 which only has B & C inserts). The inserts are color coded and have small letters on them. Take two of the same color insert, C, for example and put them into the punch. This will give you a corner punch, the B inserts give you a different corner. The A inserts give you a border. Using the punch without any inserts gives you another border.

To punch a border using insert A, find the center of your paper and punch with the center of the punch lined up with the center of the paper. Then line up the edge of the punch with the center of the design you just punched and punch again. Repeat on both sides of the original punch and you'll have a border.

To create a border without any insert start it's best to practice on scrap paper so you know how to line up the punch so that the edges meet to create a decorative border. One you've created a sample for yourself start with the punch upside and just slightly off the edge of the paper (as you want the bottom piece of the paper to come off). Then turn the punch right side up and line up the edge of the punch with the appropriate place on the punch you just made. Punch along the edge of the paper and you'll have an even border. Getting this border just right requires just a bit of practice.
